

Demonstrable explosion safety in one clear overview.

A calm, practical summary showing how EPD, hazardous area classification, inspections, equipment suitability and maintenance work together in one demonstrable ATEX file.

Why this one-pager

ATEX information is often spread across zone drawings, EPD documents, inspections, maintenance and loose actions. That makes it difficult to prove that the whole file is coherent during audits or changes.

What Exquintia adds

Exquintia helps connect those elements into a technically defensible file that matches the installation, the standards and daily practice.

Inside the one-pager

- When an EPD is genuinely useful
- Why zoning alone is not enough
- How inspection and maintenance connect
- Which next step makes sense when the file is fragmented

Built for

HSE, QHSE, maintenance, engineering, plant management and industrial companies with gas, vapour, dust or hydrogen risks.
